

Memory Support

The Villa at Florham Park's memory support team takes great pride in the compassionate care it provides to our residents with dementia and/or Alzheimer's disease. Personalized care plans and a structured daily routine are developed to accommodate varying levels of memory loss and cognitive impairments.

Our memory support residents enjoy The Villa's home-like environment and the added comfort of their spacious private rooms.

Planned group and individual activities are offered around-the-clock to maintain a familiar atmosphere, and encourage residents to participate in engaging social conversations. Showing respect to residents, the staff encourages them to make their own choices, whenever possible.

New! The Villa's Assisted Living has expanded to include a dedicated, secure memory support neighborhood of 27 private rooms. Specially designed for those experiencing stages of dementia, the memory support neighborhood provides the perfect balance of independence for the resident and peace of mind for their family.

We are excited to bring this additional offering onto our campus, in an effort to assist in transitioning residents through our full continuum of memory support care.
